

# Capital Project Bundling Automation

Deploy selected projects from your Decision Support System (DSS) to your work management and/or ERP.

**1** The Automation performs a **Scheduled Query** against the capital planning **decision support system (DSS)** to retrieve the selected budget scenario with bundled project.

**2** Capital Projects, bundled with work against assets, estimates, and funding sources are mapped to the **Common Message Model**.

**3** Bundled projects are divided into projects with work orders. Estimates for a project are accumulated from work and designated funding sources, and the project is configured in the **ERP** or **work and asset management system** to incorporate GL and funding sources, budgetary estimates, and the work required per asset.
