

Plan Review Automation

Automate the review of digital plans and engineering drawings from your permitting solution.

- 1 The Automation receives a notification from a **Review Task Event** configured in the **Community Development** system.
- 2 Information from the **Case and Task** is mapped to the common message model and used to create a Project in the Plan Review system.
- 3 Any Document(s) that are drawings or supporting documentation attached to the Case Task are moved into the **Plan Review system**. Users associated to the Case Task are assigned for review of the drawing.
- 4 Marked up drawings are packaged and attached to the Case Task along with the **APPROVED** or **RESUBMIT** status.
